Pneumatic bead breaker table

DQN
DU QUESNE

Just right !

Ready for take-off... !

The linear movement of its "ram" gives perfect control over the ram's trajectory. Its mobile table with the automatic locking system allows the easy positioning and the fixing of the wheel during the bead loosening. Its DQN hydraulic shock absorber guarantees a smooth bead breaking.

SIZE APPLICABLE

- For Run Flat, low-profile tyres, ... and all other passenger car, motorcycle and delivery van wheels
- Maximum tyre width : 36cm
- Rim width : 2" à 13"

SPECIFICATIONS

- Air pressure: 7 bar
- Length: 93/113 cm
- Width: 83 cm
- Max height: 148 cm
- Weight: 96 kg
- Standard color: red RAL 3020

OPTIONS

- RAL color on request
- Customized adaptations
- A second turning plate

ACCESSORIES

- The bead breaking spacer is an accessory that prevents the tyre from re-sticking to the rim and facilitates it being held by the "smooth-grip" claws of the mounting table of our Opti-fit and Pro-fit tyre changers.

The Ergo-press is the core component of the all-new Ergo range. This pneumatic table bead breaker brings comfort, efficiency and safety.

The linear movement of the Ergo-press presents many advantages: The full power created by the cylinder is directly relayed to the ram, making it the most powerful bead breaker on the market. It helps to see the trajectory better and avoid contact between the rim and the ram.

Its mobile table with the automatic locking system is activated as soon as there is contact between "the ram" and the tyre, thereby preventing any rim movement during the bead breaking.

Its unique hydraulic shock absorber (DQN Patent) ensures a smooth and safe bead breaking.

Its "ram" bead breaker shovel has been specifically designed to work on tyres with rim edge protectors, Run Flat tires as well as standard tires.

Its column is equipped with a hoop to hold the pot of mounting paste in place and a housing to keep useful small tools accessible.
